### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 to 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lovitt (US 5,115,525) in view of Owen et al (US 4,594,743). Lovitt shows an inflatable hammock mattress 1 that has an arcuate bottom surface 3 that follows the contour of a hammock sling 5. The mattress can include an inflation valve 8 at one end and has a raised perimeter that bounds the upper surface 2 of the mattress. Note that the raised portion includes a pair of side rails that extend along the side edges of the mattress, and form an extension of the upper surface of the mattress. Owen et al teaches that it is well known in the art to provide an air mattress 12 with a portable hand held inflator 16 that can engage an air inlet 144 of the mattress. The inflator device acts as an air pump to fill the mattress with air, thus sparing a user of the mattress from the task of filling the mattress by means of a hand or foot powered pump. It would have been obvious to one of ordinary skill in the art to have provided the Lovitt air mattress with a portable electrically powered inflator device as taught by Owen et al, for the purpose of allowing a user to fill the air mattress. In addition to the above, the particular shape of the Lovitt mattress would appear to be within the ordinary level of skill in the art since the applicant has not shown any particular criticality associated with the use of an oval mattress shape.

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. O'Kane and Harris et al show inflatable mattresses that have raised side edges which are of particular interest. Tai and Henderson et al show hammock mattresses which are of general interest.
